# Lab 07 : Group 11

Activity Diagram

Questions:

1. How would you represent testing of the application with multiple browsers?
   A fork section will be created where two tasks which can be executed concurrently will be represented and an if else condition will determine whether the previous steps will have to be performed or not.

2. Can generation of the patch file and update the Subversion repository be done Concurrently?
   Yes. generating the patch file and updating the SVM repository can be done concurrently and can be represented as done in the question 1 case.

3. Can patching the production code and updating the Subversion repository be done in parallel?
   No, it cannot be said definitively that both these processes will be done in parallel, it is possible that one task gets finished before the other.
